Implementation Plan

Modules: SaaS Management | Access Lifecycle Management | Access Requests | User Access Reviews

Note : This is a standard plan and Zluri will create a detailed implementation plan basis the project objectives and priorities.

Laying the Foundation

Phase 1: Kick-Off & Discovery

- Conduct kick-off and discovery workshops.
- Align on goals, KPIs, and success metrics.
- Identify key stakeholders and module priorities.
- Understand customer's IT ecosystem (HRIS, IDP, SSO, Finance).

Phase 2: Instance Setup

- Configure the Zluri environment (sandbox or production).
- Establish System of Record (SoT) connections.
- Set up workspace, roles, and permissions.
- Share documentation, training links, and Slack/email support setup.

Phase 3: Goal Alignment

- Define business objectives and implementation roadmap.
- Prioritize high-impact integrations.
- Map outcomes like license visibility, access automation, and compliance readiness.

SaaS Management

Phase 1

Application Discovery & Categorisation

- Discover apps via SSO, finance tools, and browser agents.
- Identify Shadow IT and Generative AI tools.
- Categorise apps: Managed | Needs Review | Restricted.

Phase 2

Application Management

- Integrate key applications for centralised visibility.
- Configure guardrails for restricted or unapproved tools.
- Set up real-time alerts for new or high-risk applications.

Phase 3

Licence Optimisation

- Upload licence and contract data.
- Identify unused or orphaned licences.
- Automate reclamation and seat reuse workflows.

Phase 4

Spend vs Cost Management

- Integrate finance systems for cost tracking.
- Analyse spend vs utilisation across tools.
- Configure renewal reminders and governance dashboards.
- Validate setup and move to initial go-live.

Access Lifecycle Management

Phase 1

Current State Assessment

- Understand current User Lifecycle Management (ULM) process.
- Identify birthright, department-based, and role-based apps.
- Assess automation gaps and must-have workflows.
- Decide between native SSO actions or custom workflows.
- Zluri shares a detailed ULM implementation plan

Phase 2

Enablement & Testing

- Train admins on Playbooks & Automation Rules.
- Share documentation, training videos, and workflow examples.
- Build and test pilot workflows on sample users.
- Validate provisioning and deprovisioning logic.

Phase 3

Automated ULM

- Customer replicates production workflows.
- Launch Automated ULM and transition to BAU.

zluri

Access Requests

Phase 1

Enablement

- Configure Slack or Zluri-UI based request workflows.
- Define approval hierarchy by department or role.
- Establish SLA for approvals and access provisioning.

Phase 2

Testing & Validation

- Simulate real-time requests and approvals.
- Validate provisioning through playbooks.

Phase 3

Automated Request Handling

- Launch across the organisation post successful pilot.
- Monitor SLA compliance and optimise workflows.

User Access Reviews

Phase 1: Test Certification

- Build a sample certification cycle to test approval workflows.
- Validate compliance and remediation logic.

Phase 2: Pilot Certification

- Run pilot reviews for select departments.
- Enable automated revocation/remediation for non-compliant access.

Phase 3: Recurring Governance

- Configure recurring reviews aligned with audit schedules.
- Automate remediation and report generation.
- Provide audit-ready reports for compliance tracking.

Governance & Support Model

Dedicated Support

Slack or email-based support for quick resolution.

Guided Workshops

Hands-on enablement sessions per module.

CS-Led Enablement

Workflow validation, testing, and knowledge transfer.

Quarterly Business Reviews

Continuous optimisation and roadmap alignment.
