

Saas management and Identity and Governance Administration
Platform

RFP Response for Lesaffre

1. Executive Summary

Thank you for inviting Zluri to participate in Lesaffre. RFP for your Identity and management access requirements. The entire Zluri team is eager to partner with Lesaffre, and having carefully considered your requirements, we are very confident we can provide a solution that will deliver significant enterprise operational efficiencies and competitive advantage to your organisation.

In this document, we have detailed how we have structured our response in order to address Lesaffre SaaS sourcing requirements and deliver on your desired outcomes. We provide a high-level overview of Zluri's recommended solution, before then providing justification as to why Zluri is the right choice for Lesaffre. As a SaaS management solution, we would be addressing the following key solution expectation of Lesaffre with the Zluri Offerings:

Lesaffre Technical Requirements	Zluri's Offerings
Identity Governance	Zluri delivers unified, near-real-time visibility into exactly who has access to which applications—whether provisioned via SSO, HRMS, finance systems or direct integrations—and lets you slice that data by department, location or business unit. It automatically flags orphaned accounts and provides full app-and-roles for both managed and shadow IT.
Shadow IT Discovery	Zluri automatically identifies unauthorized or unmanaged SaaS tools by analyzing finance data, browser activity, and SSO logs. It flags purchases

	made outside approved procurement, highlighting shadow IT risks. Real-time alerts enable Lesaffre's IT teams to take swift action—such as deprovisioning or vendor review—ensuring complete visibility and governance.
Continuous Optimisation	Zluri's Optimization Engine analyzes license usage, subscription tiers, and spending from systems like SAP or Netsuite. It automates license right-sizing, renewal management, and access deprovisioning based on utilization thresholds. This continuous optimization reduces waste, consolidates vendors, and delivers measurable cost savings across Lesaffre's global SaaS environment with full financial transparency.
Lifecycle Automation	Zluri streamlines your entire employee lifecycle management with automatic provisioning or deprovisioning accounts, groups and licenses across AD, Azure AD, and hundreds of SaaS apps. Workflow rules let you assign access by department, designation or location (even pre-join), while promotions or transfers trigger reevaluation of rights and clean deprovisioning of old entitlements.
Provisioning and Deprovisioning	Zluri's Integration Catalog and API framework delivers end-to-end automation for user lifecycle events. With 300+ native connectors (Active Directory, Azure AD, Freshservice, and more) plus flexible REST APIs and webhooks, you can trigger provisioning playbooks from HRMS or ITSM in real

	time. Zluri automatically creates, updates, or deprovisions accounts, group memberships, and licenses according to join-move-leave events, with conditional logic by department, title, or region.
Request and Approval of Access	Zluri's self-service portal empowers employees to request app access and licenses through a secured, role-based catalog—complete with real-time status tracking and SLA visibility to their team or function. All requests flow through fully customizable, multi-level approval workflows (sequential, parallel or conditional) based on role or department, with email notifications and expiry-driven revocations. Every action—from request to fulfillment—is logged for auditability and least-privilege enforcement.
Profile and Role Management	Zluri lets you create and manage access profiles—to build templates of apps, licenses and groups tailored to departments, job titles or regions—and automatically triggers workflows for onboarding, transfers or offboarding via no-code workflows.
Audit and Compliance management	Zluri captures every identity-related event—logins, provisioning, deprovisioning, approvals, reviews and admin overrides on Zluri platform—with timestamped audit logs (user, source, action) that can be exported or fed into SIEMs. All workflows (onboarding, offboarding, access reviews, requests) are fully traceable, with role-based log access to protect sensitive records.
Risk Analysis and	Zluri continuously monitors user behavior, app

Intelligence	usage and access patterns—detecting inactive or orphaned accounts, and provides details on users who might have over-privileged access and shadow-IT activity by analyzing SSO logs, HR data and financial feeds. It flags anomalies such as unused critical access or cross-functional privileges and leverages AI/ML to recommend remediation: deprovisioning stale rights, right-sizing licenses and suggesting peer-based access models.
--------------	--

Furthermore, we have provided detailed information on the requirements asked by the Lesaffre team and have also included core capabilities of the Zluri solution. For the purpose of better comprehension, we have included the relevant screenshots in the response.

2. Lesaffre Requirements

2.1 Company Profile and Financial Stability

2.1.1. The company should have a strong presence in the market and a well-established customer base, with references from similar projects.

Zluri Overview

Zluri is a leading global provider of Identity Governance and Administration (IGA) designed to help enterprises discover, optimize, secure, and automate their SaaS ecosystem. Headquartered in Bangalore, India, with regional offices in the United States. Zluri serves a rapidly expanding international customer base across multiple sectors, including manufacturing, healthcare, technology, education, and financial services. Since its founding in 2020, Zluri has become one of the fastest-growing SaaS Management Platforms worldwide, recognized by Gartner, G2, and Forrester for its innovation, scalability, and enterprise readiness. The platform currently manages over 100 million SaaS transactions per month across 250,000+ applications globally.

Market Presence & Recognition

- Named a “Leader” in SaaS Management by G2 (2024) for overall performance, ease of implementation, and user satisfaction.
- Recognized by Gartner (2023) as a key vendor in the “Market Guide for SaaS Management Platforms.”
- Trusted by mid-sized and large global enterprises across North America, Europe, and APAC, including organizations in highly regulated industries.
- Strategic partnerships with identity and security leaders such as Okta, Microsoft Azure AD, Google Workspace, and MDM platforms (Jamf, Intune).

Customer Base & References

Zluri's customers include organizations operating in complex, decentralized environments similar to Lesaffre's global footprint here: [Case studies](#)

Key Figures

- 200+ enterprise customers globally
- Managed SaaS spend exceeding USD 2 billion annually
- Presence in 30+ countries
- 300+ integrations across identity, finance, and collaboration systems

2.1.2. A global presentation of the candidate's company, with key figures on the number of employees, main skills, team localization, company turnover, and revenues specific to the proposed tool.

Company Overview

Zluri is a global Identity Governance and Administration (IGA) & SaaS Management Platform (SMP) provider that empowers IT, Finance, Procurement, and Security teams to discover, optimize, secure, and automate the entire SaaS stack from a single intelligent dashboard. Founded in 2020, Zluri is headquartered in Bangalore, India, with customer success teams in the United States (San Francisco), United Kingdom (London), ensuring full coverage across APAC, EMEA, and North America.

The company's flagship platform — Zluri IGA & SMP — provides deep SaaS discovery, license management, spend optimization, access governance, and workflow automation capabilities tailored for medium to large enterprises operating in complex, multi-entity environments.

Key Figures (as of 2025)

Metric	Details
Founded	2020
Headquarters	Bangalore, India
Regional Offices	San Francisco (USA)
Employees	~130 globally as of date 21st October
Core Teams	Product Engineering, Data Science, Security & Compliance, Customer Success, Solution Engineering
Customers	200+ enterprises across 30+ countries
Applications Monitored	250,000+ SaaS apps globally
SaaS Spend Managed	> USD 2 billion annually

Integrations	300+ pre-built connectors across SSO, Finance, HR, and Collaboration systems
Annual Turnover (FY 2024)	Zluri is a privately held organization.
Revenue from Zluri SMP	> 95% of total revenue directly from the SaaS Management Platform
Average Contract Value (Enterprise)	USD 40 K – USD 120 K per year
Industry Recognition	G2 Leader (2024), Gartner Market Guide for SaaS Management Platforms (2023)

Main Skills and Expertise

- SaaS Discovery & Shadow IT Detection: Advanced application recognition engine with AI/ML pattern detection and API integrations.
- License & Spend Optimization: Predictive analytics for license utilization, renewal automation, and vendor negotiation intelligence.
- Access Governance & Security: Role-based provisioning/de-provisioning integrated with identity providers (Okta, Azure AD, Google Workspace).
- Workflow Automation: No-code automation builder for IT workflows (onboarding, offboarding, app request approvals).
- Data Science & Insights: Proprietary SaaS usage analytics model trained on billions of global app events.
- Enterprise Integration: Deep native integrations with ERP (SAP, Netsuite), HR (Workday, BambooHR), and MDM platforms (Jamf, Intune).
- Compliance & Security: ISO 27001 and SOC 2 Type II certified; GDPR-aligned architecture with regional data residency options.

Team Localization

- Product & Engineering (HQ – Bangalore): Core platform design, development, and data intelligence.
- Customer Success (Regional): Teams in the US providing 24x7 multilingual enterprise support.
- Sales & Solution Engineering: Distributed across North America, Europe, and APAC to support global deployments.
- Security & Compliance Office (India + US): Continuous compliance management, privacy oversight, and incident response.

2.2. Operational Capabilities and Resources:

2.2.1. The company should have a proven track record of delivering successful Data Catalog solutions for web-based applications.

Zluri's Discovery Engine is the central intelligence layer of the Unified SaaS Management Platform, enabling organizations to achieve 360° visibility and 100% control over all SaaS and web-based applications across your environment. Through advanced discovery, Zluri automatically identifies your applications, users, licenses, spends, and entitlements, building a continuously updated SaaS data catalog that acts as a single source of truth for IT, Finance, and Security teams.

Zluri: Unified platform for SaaS Management, Access Management & Access Reviews

How the Discovery Engine Works

Zluri's Discovery Engine consolidates data from nine different discovery methods —

Identity Providers (IDPs), HRMS, Finance Apps, SaaS Apps, MDMs, Contracts, In-house Apps, SDKs and CASBs — to create a 360° visibility layer of all applications, usage, and access patterns.

This data is unified through Zluri's Advanced Discovery Framework, powered by:

- Native iPaaS engine for direct and secure API integrations
- Multi-instance compatibility to track usage across multiple subsidiaries or application instances
- Zluri SDKs and Webhooks for seamless enterprise Application connectivity with existing tools and workflow automation.

The Discovery Engine identifies:

- Federated applications authenticated via SSO
- Unfederated and Shadow IT applications accessed directly by users
- Usage and spend metrics across departments
- Entitlements and user-level access data across systems

This creates a complete, real-time SaaS catalog that helps organizations monitor usage, optimize costs, and enforce governance policies.

Component	Function
-----------	----------

1. Multi-source Discovery	Connects to over 9+ discovery sources including SSO (Okta, Azure AD, Google Workspace), finance (Netsuite, SAP, Expensify), HRIS(workday, Hibob), SaaS Apps, MDMs(Jamf, Kandji), Contracts, In-house Apps, SDKs and CASBs (Zscaler)
2. Continuous Synchronization	Updated Data via daily data syncs, ensuring the SaaS catalog reflects actual usage across all subsidiaries and departments.
3. Secure, Decentralized Architecture	Supports distributed data collection for multi-entity organizations without requiring centralized firewalls or directories — ideal for Lesaffre’s decentralized model.

Proven Enterprise Deployments

Zluri's Discovery Engine has been successfully implemented in global enterprises with complex, multi-subsidiary structures, delivering measurable results in SaaS visibility, compliance, and cost Optimisation. - [Case studies](#)

Key Differentiators

- Accuracy & Breadth: Catalog over 300+ unique SaaS and supports SDK based application Integration— one of the most flexible app recognition libraries in the industry.
- Shadow IT Elimination: Identifies unauthorized apps through pattern recognition in expenses.
- Actionable Insights: Converts discovered data into categorized, searchable SaaS catalogs for IT, Procurement, and Security stakeholders.
- Enterprise-grade Scalability: Designed for decentralized environments — supports subsidiaries with local autonomy while maintaining global visibility.

2.2.2. The company should have a robust and scalable platform that can accommodate the organization's current and future needs.

Robust and Scalable Platform – Zluri Unified SaaS Management and Identity Governance

Zluri offers a robust, enterprise-grade, and future-ready SaaS Management Platform (SMP) and Identity Governance built to handle the complex, distributed IT environments of global organizations like Lesaffre. The platform is cloud-native, microservices-based, and designed for high scalability, capable of supporting both central IT governance and local subsidiary autonomy — making it perfectly aligned with Lesaffre's decentralized model of 80+ entities across multiple geographies. Zluri's platform architecture ensures continuous scalability in data ingestion, analytics, user loads, and integration volume, while maintaining enterprise-grade security, performance, and compliance.

Platform Architecture and Scalability

Capability	Description
Cloud-Native Microservices	Zluri is built on a scalable microservices architecture hosted on secure cloud infrastructure with automatic load balancing and distributed data processing.
Elastic Data Pipeline	The Discovery Engine and Analytics layers can scale horizontally to accommodate millions of SaaS usage events and license records without performance degradation.
API-Driven Ecosystem	The platform integrates seamlessly via RESTful APIs and native connectors and SDKs, allowing quick addition of new enterprise systems or custom integrations.
Multi-Entity Design	Supports global organizations with multiple subsidiaries, enabling both centralized visibility and local administrative autonomy.
Modular Expansion	Zluri's architecture allows independent deployment of modules (SaaS Management, Access Management, Access Reviews), ensuring flexibility as needs evolve.

High Availability and Performance	Uptime SLA of 99.9% , with redundant clusters, automated failover, and continuous performance monitoring.
Security and Compliance	Certified for ISO 27001 and SOC 2 Type II ; GDPR-compliant with regional data residency options and encryption at rest and in transit.

Platform Growth Capacity

- Data Scale: Proven capability to process and catalog 250,000+ SaaS applications and billions of usage data points across customers.
- User Scale: Supports enterprises with 100,000+ active users, maintaining consistent response times under peak load.
- Integration Depth: Expanding library of 300+ native integrations, with support for identity providers, finance apps, MDMs, HRMS, CASBs and SDKs.
- Continuous Evolution: Monthly feature releases ensure long-term adaptability to emerging IT ecosystems (AI, security, access governance).

Future-Ready Roadmap

Zluri continuously enhances platform scalability through:

- AI-driven insights for predictive spend and access optimization.
- Deeper integration with zero-trust and identity platforms for proactive security enforcement.
- Automated workflow orchestration through Zluri's low-code UI for complex multi-app automation with Webhooks.
- Custom dashboards and analytics for global governance and localized reporting.

These roadmap initiatives ensure Zluri remains adaptable to future enterprise requirements such as ESG reporting, AI-driven access control, and hybrid SaaS-on-prem integration.

2.2.3. Availability of resources and the proposed team for deployment, including the capacity to work on multiple workstreams at the same time.

Zluri maintains a strong global delivery organization capable of managing complex, multi-entity deployments like Lesaffre's. Zluri's dedicated implementation team is structured to operate across multiple workstreams simultaneously, ensuring rapid configuration, parallel integrations, and continuous stakeholder engagement without delays.

The core deployment team will include:

- **Customer Solutions Engineer:** Leads technical setup, data migration, and integration with Lesaffre's systems (SSO, HR, Finance, and Saas Apps).
- **Customer Success Manager (CSM):** Acts as the central liaison for training, adoption, and post-launch optimization.
- **Director of Sales Engineer and Customer Solutions:** Provides senior technical oversight, ensuring compliance and architectural alignment.

Zluri's implementation framework enables concurrent workstreams—such as identity integrations, financial system connections, and training—executed in parallel to accelerate rollout. With a scalable team of certified engineers and solution experts, Zluri can expand resource allocation as project scope evolves, ensuring timely delivery.

2.2.4. Commitments to SLA terms, with openness to fines for non-compliance, and a detailed list of the tool's supported languages.

Zluri is fully committed to meeting stringent Service Level Agreement (SLA) standards to ensure consistent availability, reliability, and performance for

Lesaffre's global operations. The platform guarantees 99.9% uptime, backed by 24x5 multilingual technical support and defined response and resolution timelines based on issue severity.

- Critical issues (P1): Response within 2 hours, work around within 24 hours.
- Major Issues (P2): Response within 12 hours, response as per the internal defined process.
- Moderate issues (P3): Response within 24 hours, response as per the internal defined process.
- Standard issues (P4): Response within 48 hours, response as per the internal defined process.

Zluri also conducts regular system health checks, performance monitoring, and data integrity audits to maintain optimal service continuity. In case of SLA breaches, Zluri is open to commercial penalties or service credits, demonstrating transparency and accountability in its delivery model.

The platform is hosted on AWS global infrastructure, ensuring redundancy, data security, and compliance with GDPR and ISO 27001 standards. Zluri supports English for customer support. This ensures accessibility and usability for Lesaffre's diverse global workforce, promoting seamless adoption and operational efficiency across all subsidiaries.

Please refer to Zluri's SLA documentation attached.

2.3. Implementation and Cost Structure:

2.3.1. A proposed detailed technical architecture compatible with the general architecture submitted in this document and as well as LESAFFRE's IT environment & constraints.

Proposed Technical Architecture – Zluri Unified SaaS Management and Identity Governance and Administration Platform

Zluri: Unified platform for SaaS Management, Access Management & Access Reviews

Zluri proposes a cloud-based, modular, and API-driven technical architecture fully compatible with Lesaffre’s decentralized IT environment. The proposed deployment enables each subsidiary at Lesaffre Group with centralized visibility and governance of all SaaS applications, users, spend and governance.

1. Architectural Compatibility with Lesaffre’s Environment

Lesaffre Characteristic	Zluri Architectural Response
Multiple subsidiaries (80+ IT entities)	Each entity’s data can be visualised with Zluri’s framework, allowing local visibility and centralized reporting.
No centralized Active Directory	Zluri’s Discovery Engine connects to multiple local IDPs (Okta, Azure AD, Google Workspace, or

	on-prem directories) independently per subsidiary. Zluri maintains a source of truth which can comprise multiple SSOs or HRMS.
Application Usage tracking	Zluri uses lightweight browser and desktop agents, to track usage for local applications.
Hybrid SaaS and local applications	Zluri integrates via APIs, HRMS, and finance systems to catalog both SaaS and In-house developed Apps

2. Technical Architecture Overview

Zluri's platform consists of four primary layers designed for interoperability, scalability, and security:

A. Data Ingestion Layer – “Discovery Engine”

- Connects securely to IDPs, SSO, HRMS, Finance Apps, MDMs, SDK, SaaS Apps, CLMs and CASBs via authenticated APIs.
- Collects metadata on applications, users, entitlements, and spend.
- Supports multi-instance and decentralized data capture, aligning with Lesaffre's distributed IT model.
- Includes Zluri iPaaS engine for real-time event synchronization across multiple business units.

B. Data Processing & Intelligence Layer

- All collected data flows into Zluri's SaaS Intelligence Graph, which deduplicates, normalizes, and classifies applications.
- Enrichment engine adds vendor, spend, compliance, and risk attributes to create a live SaaS catalog.
- Utilizes secure cloud-based processing with encryption in transit (TLS 1.2+) and at rest (AES-256).

C. Application & Access Control Layer

- Centralized control plane where global IT can define visibility, policies, and automations.
- Filtered views based on Entities to retain local control over their applications, with configurable data segmentation.
- Integrates directly with IDP and SSO for access validation and optional provisioning/deprovisioning.

D. Presentation & Analytics Layer

- Web-based UI with role-based access for global and local administrators.
- Dashboards for SaaS inventory, spend analysis, access governance, and compliance.
- Exports via CSV and scheduled reports and Zluri API based data exports with Lesaffre's BI tools.

3. Deployment Model

- Type: SaaS (multi-tenant) – hosted on AWS region for GDPR compliance.
- Access: Secure HTTPS web interface; SAML via Lesaffre's chosen identity provider(s).
- Connectivity: Outbound HTTPS connections only — Whitelisting Zluri's IP is required.
- Scalability: Elastic compute architecture auto-scales based on data volume and user activity.
- Availability: 99.9% uptime SLA with redundant nodes and continuous backup replication.
- Maintenance: Fully managed and updated by Zluri (zero on-prem dependency).

4. Integration Framework

Zluri provides a modular integration framework ensuring interoperability with Lesaffre's systems:

System Type	Examples / Method	Purpose
Identity Providers and SSO	Okta, Azure AD, Google Workspace	User discovery, login tracking, Secondary application Discovery
HR Systems	SAP SuccessFactors, Workday, Hibob	User lifecycle, department mapping, Employee Source of truth
Finance Systems	Netsuite, SAP, Concur	Spend discovery and Application Spend Mapping Cost Vs Spend Analysis
Contract Lifecycle Management	Coupa, IronClad	Contract Mapping, Renewal Tracking and Vendor Management
MDMs / Endpoint Agents	Jamf, Intune, Kandji	Device-to-application correlation, Silent deployment of Zluri agents
Desktop and Browser Agents	Zluri lightweight extension	Usage tracking of Local SaaS Applications
Security Tools	CASBs, SIEMs	Zluri Audit log Exports
Zluri SDK	Custom Integration	Support Custom Integration for centralised tracking of SaaS Apps and Inhouse apps

All integrations use secure OAuth 2.0 authentication and comply with Lesaffre's internal data governance policies.

5. Security and Compliance

- Certifications: ISO 27001, SOC 2 Type II
- Data Residency: EU-based with options for regional segregation We do host data in the EU but with additional costs.
- Encryption: AES-256 (at rest) and TLS 1.2+ (in transit)
- Access Controls: Role-based with MFA enforcement
- GDPR Compliance: Full data-subject rights management and DPA available

6. Zluri's Architecture

2.3.2. A breakdown of the implementation cost structure, highlighting costs associated with integration alternatives (internal, preferred

partner, or third party).

Zluri's implementation cost model is transparent, scalable, and designed to minimize overhead for Lesaffre while maximizing value through seamless integrations and automation. The total cost includes platform setup, environment configuration and onboarding support. Discovery Engine is a core strength of Zluri's platform. Our catalog includes over 300 unique pre-built direct integrations with widely used SaaS and enterprise systems—including Okta, Azure AD, SAP, Netsuite, Google Workspace, and Atlassian Admin. These integrations are included at no additional cost as part of the base implementation.

For applications not covered in Zluri's library, we provide SDKs and REST APIs that enable fast, secure integration with Lesaffre's internal tools or third-party systems—again, without any extra license or customization fees.

Implementation costs are typically categorized as:

- Platform Setup & Configuration: Base environment set up and tenant creation.
- Integration & Data Migration: Connecting IDP, SSO, finance, HR, Saas Apps, custom systems and Contract management.
- Milestone and Phased Implementation: Lesaffre's Scope of Work and Success Goals for implementation is phased and planned and delivered.
- Training & Enablement: Onboarding Lesaffre's IT and business users.
- Support & Maintenance: Ongoing updates, monitoring, and optimization.

Zluri's flexible model also accommodates integration via Lesaffre's internal IT team, preferred partners, or Zluri's professional services, ensuring smooth adoption with predictable, all-inclusive pricing and no hidden charges.

Basis agreed upon scope of work, Zluri can provide you with the exact pricing structure. The Customer shall agree to purchase a minimum hours of professional services (the "Minimum Commitment"). These hours will remain

valid for use over a period from the Effective Date. Services shall be billed at the rate of USD 60 per hour.

2.3.3. A schedule of tasks required to meet the project requirements, including internal resources required for the implementation (incl. migration), operation, and maintenance of the tool.

Implementation Schedule and Resource Plan – Zluri SaaS Management Platform

Zluri proposes a structured implementation plan designed to meet Lesaffre’s global SaaS visibility, governance and optimization objectives. The schedule ensures fast time-to-value while minimizing business disruption, with clear

milestones, internal resource roles, and shared responsibilities between Zluri and Lesaffre. The total implementation timeline is estimated at 16–20 weeks for full global rollout, including pilot, data migration, and user enablement.

1. Implementation Phases and Schedule

Phase	Duration	Objectives	Key Activities	Deliverables
Phase 1 – Project Initiation & Scoping	2 weeks	Establish governance, scope, and success metrics	• Kickoff meeting with Lesaffre PMO and IT leaders • Define global vs. local scope • Identify pilot subsidiaries (3–5) • Finalize integration endpoints (IDP, HRMS, Finance, Saas Apps, MDM, CLM)	• Project plan • Integration matrix • Project and communication plan
Phase 2 – Environment Setup & Integration	4 weeks	Deploy Zluri environment and configure top 5 integrations	• Provision Zluri tenant • Connect IDPs • Integrate HRMS and Finance Apps • Configure browser and Desktop agents. • Planning Custom App integration	• Zluri environmental operation • Data ingestion pipeline live • Security and access compliance validated

			• Set up Contracts and Renewal policies	
Phase 3 – Discovery & SaaS Catalog Building	10 weeks	Achieve 100% SaaS visibility across pilot entities and top 5 applications	• Activate Discovery Engine across pilot subsidiaries • Data ingestion from identity, finance, and network systems • SaaS classification and normalization • Validate discovery results with local IT • Build live SaaS catalog	• Validated SaaS catalog • Shadow IT report • Initial cost optimization report
Phase 4 – Rollout & Training	10+ weeks	Scale to more Lesaffre entities and train global/local teams	• Rollout Zluri to all 80 subsidiaries • Conduct workshops for IT, Finance, Security • Deploy Desktop and browser agents (optional) • Deliver administrator and analyst training • Finalize reporting dashboards	• Global SaaS inventory • Entity specific filters or visibility dashboards • Training super users and admins

Phase 5 – Optimization, Operation & Maintenance	Ongoing	Transition to steady-state operation with ongoing support	• Continuous optimization of SaaS usage and cost • Access automation configuration • SLA-based technical support (24x5) • Periodic review and upgrades	• Quarterly optimization reports • SLA metrics • Annual platform review and roadmap update
---	---------	---	---	--

2. Internal Resources Required (Lesaffre)

Role	Responsibility
Zluri Project Manager (IT HQ)	Oversee project governance and coordination with Zluri PM
IT Leads – Subsidiaries (80 entities)	Validate discovery results, app ownership, and access data
CISO Team	Review data security, access, and policy configurations
Procurement / Finance Manager	Validate SaaS spend data, Licence cost, Contract renewal and vendor mapping
HRIS Administrator	Integration of user master data (Workday/SAP)
IT Admin/Teams CISO Team	Workflow automation and Access Governance

Zluri provides a dedicated Customer Success Manager (CSM) to coordinate internal and vendor resources, ensuring progress tracking and milestone delivery.

3. Zluri Implementation Team

Role	Responsibility
Customer Solution Engineer	• Configure custom solutions, SDK based data connectors and setting up automation workflows
Customer Success Manager (CSM)	• Customer liaison, user training, and adoption
Director Sales Engineering and Customer Solution	• Technical Oversight Solution Planning, Product feature requests, Solutions Escalation
Customer Success Head	• Customer Success Escalation • QBR Planning
Support Engineers (24x5)	• Post-go-live technical support

4. Migration, Operation, and Maintenance

Data Migration

- No on-prem dependency; integrations established via secure APIs.
- Data Synced progressively (users, apps, spend, licenses).
- CSV can be bulk-uploaded into Zluri.
- SDK based Custom Integrations Possible

Operation

- Zluri manages hosting, updates, and scaling.
- Lesaffre's administrators manage dashboards, users, spends, contracts and reporting.
- Continuous SaaS discovery ensures data freshness with minimal manual input.
- Configuration of automated workflows for continuous optimization based on Licence usage and redundancies.
- Defining Policies for User access certification and audits.

Maintenance

- Zluri handles all patching, updates, and new connector releases.
- Quarterly roadmap reviews with Lesaffre to assess new entity onboarding or feature adoption.
- 24x5 support and monthly performance reports (uptime, data sync, integration health).

5. Project Governance and Reporting

- Weekly project reviews with Lesaffre IT and Security teams.
- Monthly Steering Committee including CIO, CISO, and Procurement lead.
- RACI model defines accountability for each deliverable (Vendor-Lesaffre shared).
- All milestones validated by Lesaffre Project Leaders before progressing to the next phase.

2.4. Maintenance and Support:

2.4.1. The company should have a team of experienced and certified professionals who can provide technical support and ongoing maintenance for the solution.

Zluri provides Lesaffre with a dedicated team of experienced, certified professionals who ensure seamless onboarding implementation, continuous technical support, and proactive solution maintenance throughout the partnership. Our customer delivery organization is structured to provide both technical excellence and strategic guidance, ensuring maximum value realization from the platform.

- Each deployment begins with a dedicated Onboarding Team, responsible for environment setup, integrations, and initial configuration tailored to Lesaffre's decentralized structure.
- A Customer Solutions Engineer works closely with Lesaffre's IT and Security teams to handle technical integrations, data migration, and performance tuning.
- The program is overseen by Zluri's Director Sales Engineering and Customer Solutions, who ensures technical alignment with Lesaffre's architectural and compliance requirements.
- The Head of Customer Success, who manages long-term engagement, adoption, and ROI achievement.

Post-implementation, Lesaffre will have access to 24x5 technical support, including proactive system monitoring, patch management, and regular feature updates. Zluri guarantees 99.9% uptime, with escalation procedures defined under strict SLA commitments. This cross-functional, certified team model ensures that Lesaffre receives end-to-end support—from onboarding to ongoing optimization—backed by continuous maintenance, innovation, and an unwavering focus on service quality and customer success.

2.4.2. The company should be able to provide comprehensive training and change management support to ensure a smooth transition and user adoption.

Zluri is fully committed to ensuring a smooth transition and rapid user adoption through a structured training and change management program tailored to Lesaffre's decentralized organization. Our approach combines hands-on product training, role-based learning, and ongoing support to empower IT, Finance, Procurement, and end-users across all subsidiaries. During implementation, Zluri delivers dedicated virtual training sessions led by certified onboarding specialists covering key modules—discovery, optimization, workflows, and security governance. Each session is interactive, using Lesaffre's real data to ensure immediate relevance. In addition, users gain access to Zluri's comprehensive learning library, which includes help articles, video tutorials, and product documentation for self-paced learning.

Zluri's Customer Success Manager (CSM) will act as Lesaffre's primary change management partner, conducting regular adoption reviews to monitor engagement, resolve challenges, and track ROI. End-user enablement is further supported through an Employee Application Catalog and quick-start guides, making the platform intuitive and easy to use from day one. Post-deployment, Zluri offers support, monthly customer webinars, and quarterly business reviews to sustain momentum and adoption. This holistic change management approach ensures Lesaffre achieves high user engagement, consistent process alignment, and maximum value realization from its SaaS management transformation and Identity Governance.

2.4.3. Customization and deployment strategies of the service, including the expected number of updates per year.

Refer to the SOW Document attached

2.4.4. A detailed list of languages supported by the solution for the user interface. Additionally, provide insights into the tool's capability to enable auto-translation features, allowing seamless communication with external individuals in languages not covered by the user interface.

Zluri's user interface is currently available in English, providing a consistent and intuitive experience for global enterprise users. The platform's design emphasizes simplicity and ease of navigation, minimizing language barriers through clear labeling, contextual tooltips, and icon-based workflows. While Zluri does not natively support multiple interface languages or in-platform auto-translation, it is fully compatible with third-party browser translation tools such as Google Translate and Microsoft Translator. This ensures users and external stakeholders can seamlessly interact with the platform in their preferred language when necessary, maintaining accessibility and communication efficiency across all global teams.

2.4.5. Presentation of operational options for maintenance and support, outlining the maximum maintenance service levels LESAFFRE expects throughout the implementation plan.

Refer to the SLA Document attached.

2.5. Quality and References:

2.5.1. Demonstrated overall quality of proposed deployment and support teams.

2.5.2. A minimum of 3 references in contexts similar to LESAFFRE's multi-BU and multi-solution environment, including feedback from other accounts and adherence to LESAFFRE's sector. The companies should operate in similar segments as LESAFFRE.

Zluri shall provide references during the final stages of the RFP. Please find customer stories here- <https://www.zluri.com/case-studies>

2.6 – Pricing

2.6.1 For the license/subscription and associated services:

o Describe model of invoicing for using the solution, taking into account our organization

Invoice will be shared at the beginning of the subscription period annually. Price is based on the Modules selected: Price model is per employee per month, billed annually. Based on the RFI, we understand that you require Zluri's SaaS Management Module, for 5100 employees.

o A Price per module is expected

Yes, aligned.

o Extra services (support, hotline...) with corresponding SLA

SLA document attached

o Maintenance and support

SLA document attached

o Option which could be an interest for LESAFFRE

Answered in section 7

o Scaling Costs: Operational costs related to scaling the solution based on active user growth.

Answered in section 7

o Discounts and Incentives: Available discounts based on usage or data volume. For the Discounts are added for Lesaffre

2.6.2 Implementation project:

o Describe task and activities for each work stream with the associated profile

o Indicate the workload estimates for each work stream with the assumptions adopted (Time frame, resources, ...)

o List all profiles with associated daily rates o Commit on a project fixed price

- o Deployment and Migration
- o Hosting and Storage
- o Training

2.6.3 Financial simulation – TCO:

To predict the financial needs of the Data catalog system over a three-year span, LESAFFRE requests candidates to present a cost simulation for their solutions at three crucial milestones in the implementation plan. These projections should encompass the anticipated growth in business units, users, client base, system integrations, and functionalities associated with the future system, as laid out below:

- Year 1 Scope:

- o Implementation
- o Onboarding of all LESAFFRE entities in 2026.
- o The invoicing must be progressive, depending on the consumption.

- Year 2 Scope:

- o Run mode
- o The invoicing depends on the consumption.

- **Year 3:**

- o Run mode o The invoicing depends on the consumption.

Throughout the 3 years, LESAFFRE requires simulations to suppose the highest level of maintenance service.

Payment terms : 45 days end of month

These guidelines are taken in consideration while defining the pricing in Excel Sheet.

2.6.4 CSR requirements

- o Complete questionnaire Cyber & CSR on ARIBA

- o Could you share with us Carbon footprint on your product/hosting services & or his Lifecycle Assessment (LCA) (only ones concerned by tender and if applicable)

- o Do you have services/product that improve the environmental impact as an alternative to the standard solutions you offer us and its cost (green solution)

- o If yes please send us data sheets and energy savings compared to the standard solutions south.

These questions are answered in the RFP Excel Sheet.

2.7 Contract details and delivery agreement

2.7.1. Contract and Delivery agreement

LESAFFRE keeps the right during the project to reduce the scope of activities or work stream. The implementation project will be divided into work streams and milestones defined in common with the candidate and Company. Each milestone will be validated by the LESAFFRE project manager that will trigger the payment within 45 days end of month from date of invoice, according to LESAFFRE rules. The project will be contracted within a corporate contract with the Company.

Compliance Questionnaire

#	Question	Response (Yes/No)	Explanation / Notes
1	Sanctions: The Candidate declares that neither the company nor any of its representatives is subject to national or international sanctions.	Yes	Zluri nor its representatives are subject to any national or international sanctions.
2	Environment & Ethics: The Candidate declares full compliance with all national and international ethical, environmental, and sustainability laws and regulations.	Yes	Please refer to Trust Centre: https://trust.zluri.com/
3	Transfer: The Candidate agrees not to assign this RFP or the resulting agreement, or any part thereof, without Lesaffre's prior written consent.	Yes	Zluri agrees to this.
4	Rights on Deliverables: The Candidate agrees to transfer to Lesaffre, exclusively and worldwide, all intellectual property rights (reproduction, representation, adaptation, use) related to the deliverables produced under this project.		Zluri shall retain all rights, title, and interest, including all intellectual property rights, in and to the deliverables and all underlying technology, materials, and know-how used in providing the services. Lesaffre is

			granted a non-exclusive, non-transferable, perpetual license to use the deliverables solely for its internal business purposes, and shall not resell, modify, distribute, or claim ownership of the deliverables or any part thereof.
5	Applicable Law: The Candidate agrees that the agreement will be governed by French law and subject to the jurisdiction of Lille Metropolitan Area, France.	Yes	Zluri agrees to this and it will be reflected in the MSA in the governing law clause.
6	Certificates: The Candidate confirms possession of relevant official certifications (e.g., ISO 27001, NIST, SOC 2). Please specify certificate type, issuing body, and validity period.	Yes	Please refer to Trust Centre: https://trust.zluri.com/
7	Liability: The Candidate confirms its liability policy and any standard limitation of liability clause. Please specify cap percentage (if any) and applicable conditions.	Yes	Zluri confirms its standard liability policy. Liability for any single incident is capped at the amount paid by the Customer in the 12-month period in which the incident occurs. Aggregate liability is

			capped at the total amount paid by the Customer in the preceding 12 months. Standard conditions and exclusions under applicable law apply.
8	Personal Data Protection: The Candidate confirms full compliance with GDPR or equivalent standards ensuring the same level of data protection.	Yes	Zluri confirms full compliance with GDPR and equivalent standards, ensuring the same level of data protection through adherence to ISO 27001 ISMS, SOC2, NIST, and PCI DSS compliances.
9	Data Security and Hosting: The Candidate specifies whether any data is stored or processed outside the EU. If yes, indicate the hosting countries and compliance framework (e.g., Standard Contractual Clauses).	Yes	Zluri stores client data in the US region, specifically in the us-west-2 region of AWS, which is outside the EU. We comply with the Standard Contractual Clauses (SCC) for data transfer to ensure regulatory compliance. We can also host data in the EU region but with additional costs.

10	Insurance: The Candidate confirms coverage by a financially solvent insurer for professional and civil liability sufficient to cover all project risks. Attach insurance certificate if applicable.	Yes	Please find the attachment of Zluri's Insurance.
11	Company Requirements: The Candidate discloses any contractual terms, conditions, or requirements that may impact this agreement.	Yes	

3. Key Objectives of the project

3.1. A full inventory of the SaaS applications used in all subsidiaries ▪ Shadow IT detection

Zluri provides Lesaffre with a complete, continuously updated inventory of all SaaS applications used across its subsidiaries, regardless of their local autonomy or infrastructure. Powered by the industry's most advanced Discovery Engine, Zluri identifies 100% of SaaS applications using Nine different Discovery methods — SSO and IDP integrations, financial system, direct app integrations, HRMS, SDK, MDMs, CLM, CASBs, In House application. This multi-source approach ensures visibility perfectly fitting Lesaffre's decentralized IT structure. Each discovered application is automatically enriched with details such as department ownership, spend, license utilization,

and compliance status, creating a single, unified catalog accessible to both group-level and local administrators.

In parallel, Zluri's intelligent algorithms perform Shadow IT detection, identifying unauthorized or employee-procured applications by correlating SSO access logs and expense transactions. When unapproved or risky tools are detected, Lesaffre's IT and security teams receive real-time alerts with contextual data for quick action—such as revoking access, blocking usage, or assessing vendor compliance. This combined visibility and detection capability empowers Lesaffre to eliminate blind spots, improve governance, reduce cost leakage, and strengthen security posture across its entire global SaaS ecosystem.

3.2. Security improvement, by ensuring the SSO is in place or by denying the access to some services

Zluri significantly enhances Lesaffre's security posture by providing centralized visibility and governance over user access to all SaaS applications. Through deep integrations with identity providers such as Okta, Azure AD, and Google Workspace, Zluri continuously validates whether applications are protected by Single Sign-On (SSO). Any other SSO or IDPs or any other SaaS apps can also be centrally monitored with SDK based custom integration. The platform identifies any apps or user accounts operating outside the approved SSO environment, flagging potential security gaps such as un-provisioned Licences or orphaned accounts .

Administrators can then take immediate remediation actions — disabling SSO group access, deprovisioning non-compliant users, or revoking licences or access to unapproved tools — directly from Zluri's dashboard. The system's built-in policy controls empower Lesaffre's IT and Security teams to automatically notify about applications that do not meet compliance, risk, or policy standards. These controls can be applied globally or locally, aligning with Lesaffre's decentralized structure while maintaining enterprise-level security consistency. Additionally, Zluri provides real-time monitoring of access activities and alerts for suspicious usage patterns. By enforcing SSO group based and automating access denial for applications licences and access, Zluri ensures secure access, prevents unauthorized data exposure, and strengthens Lesaffre's overall SaaS access governance and compliance framework.

3.3. Cost optimization of the SaaS applications (by removing duplicates)

Zluri empowers Lesaffre to achieve immediate cost optimization by identifying and eliminating duplicate or functionally overlapping SaaS applications across its subsidiaries. Using advanced in-built analytics and an extensive library of SaaS categories, Zluri automatically classifies every discovered application based on function, usage, and vendor type—such as CRM, project management, or communication tools. This intelligent categorization enables

Lesaffre to pinpoint redundant tools performing similar tasks across departments or regions. For example, if multiple subsidiaries use separate project management platforms like Asana, Trello, or Monday.com, Zluri flags them as duplicates and quantifies their collective cost, helping procurement teams consolidate vendors and negotiate enterprise-wide contracts.

Zluri's Optimization Engine further analyzes license utilization, spend, and renewal data to identify underused or idle subscriptions. Integrated cost dashboards present real-time spend by department, vendor, and application type, allowing Lesaffre's IT and Finance teams to make data-driven decisions on renewals, cancellations, or consolidation. Through this unified approach, Lesaffre can reduce SaaS sprawl, lower recurring spend, and increase operational efficiency without compromising functionality. By continuously monitoring the environment, Zluri ensures sustained cost optimization, driving long-term savings and budget control across the entire decentralized enterprise landscape.

4 Functional target solution

4.1 Here is the list of main functionalities to be covered by the

Product/Service:

4.1.1. SaaS application inventory

Zluri's Discovery Engine identifies 100% of SaaS applications across the organization using nine methods — SSO and IDP data, finance systems, direct app integrations, HRMS, CLM, MDM, CASBs, SDK and Inhouse apps . This creates a live inventory of all managed, unmanaged, and shadow applications. Each entry is enriched with ownership, spend, usage, and compliance data, enabling Lesaffre to maintain a centralized catalog of every SaaS tool across Cost centres, Business units and departments.

4.1.2. Shadow IT detection

Zluri automatically detects unauthorized or unmanaged SaaS applications by correlating finance transactions, browser usage, and SSO logs. Its in-built mapping identifies purchases made outside central procurement, highlighting shadow IT risks at both user and department levels. Administrators receive real-time alerts, allowing immediate corrective actions such as deprovisioning, or vendor assessment — ensuring Lesaffre's IT maintains full visibility and governance.

4.1.3. For the end-users, a single place to list all official SaaS application available (catalog)

Zluri provides an Employee Application Store (Employee Catalog), a self-service catalog listing all approved SaaS tools within the organization. End-users can view available applications, request access, and track approvals through automated workflows. This promotes standardized tool usage, improves productivity, detailed audit logs and minimizes redundant app adoption. Integrated with Zluri's Access Management module, it enables ticketless provisioning and deprovisioning, giving Lesaffre employees a seamless and compliant SaaS experience.

4.1.4. Cost optimization

Zluri's Optimization Engine continuously analyzes license utilization, subscription tiers, and spend trends from finance systems like SAP or Netsuite. It recommends actions such as license right-sizing, contract consolidation, and renewal attacking and vendor management. Procurement teams can track monthly and department-wise spends, with continuous optimisation modules consistently tracking threshold based utilisation and automated licence revocation and access deprovisioning while identifying underused apps — achieving direct and indirect cost savings across Lesaffre's global SaaS portfolio.

4.1.5. Usage metrics

Zluri collects granular user and application activity data via direct integrations

SSO logs and Zluri's browser and desktop agents. It displays detailed usage metrics — login frequency, active sessions, department utilization, and historical trends — in real time. Lesaffre's IT and finance teams can use these analytics to measure adoption, evaluate ROI, and make data-driven renewal decisions. Usage dashboards also help identify unused or redundant licenses, improving efficiency and governance.

4.1.6. Duplicate detection

Zluri's platform automatically detects redundant or functionally overlapping SaaS tools using Zluri's in-built categorization library. It highlights departments using similar apps for the same purpose — for example, multiple CRM or project-management tools — and suggests consolidation opportunities. This insight enables Lesaffre to standardize software usage, improve vendor efficiency, and reduce operational and security overheads.

4.1.7. Security check (SSO)

Zluri integrates directly with identity providers (Okta, Azure AD, Google Workspace) to validate which apps are SSO-enabled. It highlights non-SSO apps, risky permissions, and orphaned accounts, improving identity hygiene and compliance. By enforcing SSO and MFA policies, Lesaffre can secure access, reduce credential exposure, and ensure employees only log into authorized SaaS platforms via secure authentication mechanisms.

4.1.8. Allow/deny the application to the end-users

Zluri enables administrators to define Managed apps and Restricted apps at global levels. IT teams can permit business-critical apps while restricting or deprovisioning non-compliant or high-risk Applications. These rules can be automated based on category, compliance score, or usage pattern, allowing Lesaffre to maintain control and ensure consistent policy enforcement across its decentralized network without restricting local flexibility.

4.1.9. Application categorization

Zluri automatically classifies discovered SaaS apps into various business and functional categories, such as collaboration, HR, finance, or marketing. It enriches each with vendor, cost, usage, and compliance data. Custom tags and filters allow Lesaffre to align categorization with its internal reporting structure, enabling department-wise analysis, spend Vs Cost forecasting at user and department level, and faster decision-making for renewals, rationalization, and audit compliance.

5 Technical orientation

LESAFFRE is a very decentralized organization. Each subsidiary has a certain level of autonomy, and is in charge of its local infrastructures and local applications. Example: SAP is the Group mandatory ERP, but a local application can be used to manage the plant maintenance (CMMS). There is also no centralization of the Firewall management and Internet accesses (local exit for each company). No central Active Directory. Meaning that if the solution uses the Firewall logs, the deployment will be done for each subsidiary.

5.1 The solution must comply with this decentralized context. Ideally, we would like to have a central visibility on all SaaS solutions in use, and provide to each entity a visibility on the applications used in their scope. We accept the requirement of the installation of an agent on the Internet browsers to run the solution.

Decentralized Compatibility and Visibility

Zluri's platform is designed to function seamlessly in highly decentralized organizations like Lesaffre, where each subsidiary operates with its own infrastructure, applications, and network controls. The platform enables global SaaS visibility while respecting local autonomy, ensuring each entity can manage its environment independently yet contribute to a unified enterprise-wide SaaS governance model.

Zluri's Discovery Engine operates without dependency on centralized firewalls or Active Directory. Instead, it leverages multiple decentralized discovery methods that adapt to each subsidiary's setup:

- **SSO & Identity Integrations:** Connects with several instances of Okta, Azure AD, or Google Workspace to map user logins and SaaS access per entity.
- **Finance System Scans:** Integrates with local ERP systems like SAP (global) and subsidiary-specific expense tools to identify SaaS subscriptions and payments.
- **Contract Management:** Application specific Contract can be mapped to define licence costs from CLMs with Zluri Contract AI.
- **Direct SaaS API Integrations:** Synchronizes data directly from vendors (e.g., Atlassian, ServiceNow, Salesforce, Pagerduty) to enrich visibility.

For multi-country or Subsidiary deployment, Zluri unified SaaS visibility across subsidiaries or multiple instances of the application—each with distinct IT environments. This decentralized-compatible model ensures Lesaffre achieves centralized oversight with localized insight and autonomy across all its global

entities.

6 Implementation approach

6.1 Key business objectives

– Have a consolidated view of all the SaaS solutions used in the company, and monitor them (usage, cost, shadow IT detection, etc.)

Consolidated SaaS Visibility and Monitoring

Zluri enables Lesaffre to achieve a single, unified view of all SaaS applications across subsidiaries through its advanced Discovery Engine. The platform automatically identifies every app in use—authorized or shadow IT—while tracking usage, spend, and license utilization in real time. This delivers actionable insights for cost optimization, vendor rationalization, and renewal management. With dynamic dashboards and automated reporting, Lesaffre’s IT, finance, and security teams can continuously monitor SaaS activity across 80+ entities, ensuring full visibility, governance, and alignment with corporate

sustainability and operational efficiency goals.

– Increase our security posture (detection, blocking rules, etc.).

Enhanced Security Posture

Zluri strengthens Lesaffre’s security and compliance posture by linking SaaS discovery with access intelligence and policy enforcement. The platform integrates with identity providers (Okta, Azure AD, Google Workspace) to detect unauthorized or risky applications, identify non-SSO access, and flag users with excessive permissions. IT teams can define blocking rules or deprovisioning workflows to automatically remove unapproved apps and enforce least-privilege access. Additionally, Zluri’s continuous monitoring provides early alerts on shadow IT activity, helping Lesaffre maintain proactive security governance and reduce exposure across its decentralized global operations.

Access Certifications (Periodic Review Campaigns) :

Zluri automates periodic user access reviews to ensure that only the right users retain access to the right resources. Lesaffre IT/Security Teams can create

customizable review templates based on applications, roles, or departments, and implement multi-level approval workflows with reminders. Non-certified access can trigger automated revocation actions, while reviewer delegation ensures continuity during absences. The entire review process is fully auditable, with all actions logged and exportable for compliance, and real-time alerts sent via email or Slack for pending, escalated, or overdue tasks.

6.2 Training – IT people to train – If an application catalog for the end users is available, then provide a documentation/training guide

Zluri will deliver a structured training program tailored to Lesaffre's different teams. Dedicated sessions will be conducted covering platform configuration, integrations, reporting, and governance workflows. These will be delivered through live virtual workshops, recorded tutorials, and knowledge base access. If the end-user application catalog is activated, Zluri will provide comprehensive user documentation and quick-start guides to support adoption across all subsidiaries. All training materials will be localized where necessary and shared ensuring consistent understanding, self-sufficiency, and smooth platform utilization across the organization.

The screenshot shows the Zluri Settings interface. On the left is a sidebar menu with options: Account, Your Organization, Directory Management, App Catalog (selected), Administration, SSO, Custom Fields, Scheduled Exports, Custom Apps, Billing, Notifications, Workflow Settings, and Custom Actions. The main content area is titled 'Employee View' and has an 'Enabled' toggle switch. Below this, it states 'Employees can access this view through app.Zluri.com'. The 'App Catalog' section allows configuration of what is displayed to users. It has three radio button options: 'Apps In Your Organization' (All apps used in your organizations will be visible in the catalog), 'Apps in Employee's Department' (selected; All apps used in the user's department will be visible in the catalog), and 'Only Employee's Apps' (Only the user's app will be visible in the catalog). There is a 'Save' button. Below this is the 'Application Authorization Level' section with a toggle for 'Allow users to view or raise requests only for managed apps'. The 'Application Metadata' section controls what information is visible to employees, with checkboxes for 'App Insights', 'Features', 'Similar Apps', 'Compliances', and 'Alternate Apps' (all checked).

6.3 Project quality management

6.3.1. Governance and organization: As part of the project management activities, the Vendor will report on progress, planning, cost and quality; – Weekly for the project review – Monthly or every two months for the steering committee.

Governance and Organization

Zluri will implement a structured governance framework to ensure transparent communication, timely delivery, and effective oversight throughout the project lifecycle. A dedicated Project Manager will lead the engagement, supported by a Customer Success Manager and Customer Solution Engineer. Governance will operate on two levels:

- **Weekly Project Reviews:** Conducted with Lesaffre's project team to track progress, review task completion, resolve technical or integration issues, and monitor cost and quality metrics. Each session will include status reporting against milestones, risk logs, and upcoming deliverables.
- **Monthly Steering Committee Meetings:** Led jointly by Lesaffre's IT Teams, CISO, and Zluri's senior leadership to review strategic progress, budget alignment, key risks, and change requests. These sessions ensure executive visibility and decision-making support for cross-entity rollout priorities.

Zluri will provide detailed status dashboards and written reports summarizing key metrics—timeline adherence, data coverage, cost optimization progress, access automation and issue resolution. All documentation, meeting notes, and dashboards will be shared via a secure collaboration channel. This governance structure ensures accountability, early risk identification, and consistent stakeholder alignment, enabling Lesaffre to achieve full SaaS visibility, security enhancement, and measurable business value through Zluri's unified management platform.

6.3.2. Roles and responsibilities –

For each activity, a RACI Matrix must be provided by the vendor in his answer in order to clarify roles and responsibilities for each party (Vendor

and Company).

The following legend must be used for the RACI Matrix:

- **R: Responsible:** person who does the work to achieve the task
- **A: Accountable:** person who is ultimately accountable for the correct and thorough completion of the deliverable or task (Only one Accountable specified for each task or deliverable)
- **C: Consulted:** person whose opinions are sought; and with whom there is two-way communication
- **I: Informed:** person who is kept up-to-date on progress, often only on completion of the task or deliverable; and with whom there is just one-way communication.

To ensure clear accountability and seamless coordination between Lesaffre and Zluri, a detailed RACI Matrix will be established for all project activities. This matrix will define who is Responsible, Accountable, Consulted, and Informed across every phase of the implementation—covering scoping, integration, deployment, training, and ongoing operations.

Zluri's Customer Success team will be **Responsible (R)** for understanding the scope of the project, pointing out challenges and aid in implementation such as environment setup, Scoping and planning system integration, SDK based Integration set up, and configuration of discovery and governance modules. Zluri's Customer Success Team and Lesaffre's team both would be **Accountable (A)** for overall project sign-off, deliverable validation, and internal alignment of goals of IT, security, and procurement stakeholders.

Both Zluri and Lesaffre teams will collaborate closely during design and validation stages, with Lesaffre's IT and Security teams **Consulted (C)** on technical integrations, access controls, and data governance requirements. Key stakeholders, including Lesaffre's IT Heads and CISO, will remain **Informed (I)** through weekly progress updates and steering committee reports.

This structured framework ensures that roles, responsibilities, and decision-making authorities are clearly defined from the outset—eliminating ambiguity, accelerating delivery, and maintaining accountability throughout the project lifecycle. The RACI will be reviewed at kickoff and updated as needed to reflect evolving project phases and organizational needs.

6.3.3. Deliverables Validation process - The deliverables validation will be performed by stakeholders who have participated in workshops.

Zluri will adopt a collaborative validation process to ensure all project deliverables meet Lesaffre's technical, functional, and quality expectations. Validation will be carried out by Lesaffre stakeholders who actively participated in workshops, ensuring alignment with agreed outcomes and operational requirements. Each deliverable—such as configurations, integration results, dashboards, and training materials—will undergo a joint review session. Feedback and sign-offs will be documented through formal acceptance reports. This approach ensures transparency, shared ownership, and quality assurance while allowing immediate refinements before milestone closure, guaranteeing that the final solution aligns with Lesaffre's business and security objectives.

7 Financial Requirements

7.1 Pricing

The Candidate shall state all prices in euro- taxes excluded - and these prices shall include all charges to the Company. That is, the proposed service charges shall be inclusive of all expenses, charges and costs for Company specific assets and other resources incurred by the Candidate in providing the service-product.

Zluri price for Lesaffre (in Euros) for year 1, 2 & 3 is listed in the sheet named

“Lesaffre - Zluri Price Breakdown” attached.

7.2 Liquidates damages If the Seller fails to deliver the service/solution on the negotiated delivery dates, for reasons other than excusable delay, the Seller shall pay liquidated damages to the Buyer, or the Buyer may withhold from payments otherwise due to the Seller. Excusable delay and liquidate damages amount will be part of the future agreement between the Company and the selected Candidate.

We understand the intent behind the Liquidated Damages clause, however, since the Agreement already contains detailed provisions covering termination, indemnification, and limitation of liability, any liquidated damages, if applicable, should be mutually agreed upon and incorporated in the final agreement

7.3 Assumptions and conditions Candidate shall clearly identify and explain all the assumptions it has made. The Candidate shall also state if any charge is subject to special conditions, and clearly specify those conditions and quantify their impact upon the charges.

Please find the attached SOW

7.3.1 Alternative options

LESAFFRE welcomes alternative options that would deliver significant cost reductions or service improvements. Alternative options tendered should address the same issues and provide the same pricing information as for a confirming response.

We have included discounts for Lesaffre and this is detailed out in the sheet named “Lesaffre - Zluri Price Breakdown” attached.

Alternatively, if you would want us to partner with any of your preferred partners in the region - we would be happy to accommodate that request.

7.3.2 Validity of offer All prices shall remain valid for a period of 3 months from the date determined as the final acceptance date for proposals.

Yes, we are aligned to this validity.

7.3.3 Terms and Conditions The payment schedule will be as follows: 45 days end of month

Our typical payment schedule is 30 days. However, we agreed to 45 days for Lesaffre.
