Safe Harbor / Forward-Looking Statements

This document may include forward-looking statements regarding Zluri's business plans, strategies, product roadmap, and potential future capabilities. These statements are based on current assumptions and expectations and are subject to risks and uncertainties. Actual results may differ materially.

The information provided here is intended to communicate Zluri's general product direction and should be used for informational purposes only. It does not constitute a commitment to deliver any specific functionality and should not be the basis for purchasing decisions.

The development, release, and timing of any features or enhancements remain at the sole discretion of Zluri and are subject to change. Any unreleased services or features referenced may not be delivered on time or at all.

1. Access Discovery

1

AI Governance

Instant admin alerts for new AI apps and users, automated policy enforcement with email/Slack reminders, and automated access blocking for restricted AI apps.

2

Browser Agents

URL tracking with login detection, automated access blocking from unauthorized apps, and AI app monitoring for sensitive data leakage prevention.

3

Classifying NHIs / Service Accounts

Automated discovery of NHIs across AWS, Azure AD, GitHub, Snowflake, and more with lifecycle management and access reviews.

4

App Insights

Real-time actionable intelligence provided through insight cards across Security, Optimization, Shadow IT, License Management, and Usage, at an app level.

1. Access Discovery

5

Activity Logs

Enhanced activity tracking with 90-day data retention, additional metadata, and granular processing controls for reliable activity data and insights.

6

Enhanced App Suite Insights

Increased visibility into parent-child app relationships with monitoring of license activities, roles, usage, and optimization insights at the individual app and parent app levels.

7

App Policies

App management policies enabling SOD compliance, access conflict detection, GenAI policy acceptance, and automated remediation for violations.

2. Integrations & Platform Capabilities

1

Webhooks Support

Real-time onboarding instead of 24-hour sync cycles via event-triggered notifications across Azure AD, Google Workspace, BambooHR, and Okta.

2

Agentic AI

Automated fetching of data and performing actions in cases where there are no integrations available or when there are no APIs for actions on the apps.

3

Sync logs

Timestamped tracking of data sync stages from start to finish: fetching, processing, and updating.

4

On-Prem AD Connector

Agents installed on your local servers to manage users, group memberships, provisioning/deprovisioning directly from your on-premises systems.

2. Integrations & Platform Capabilities

5

Custom Integrations - CSV Upload & SDK V2

Support for additional data types beyond transactions - users, groups, contracts, and user activity with real-time error notifications.

6

New Integrations and Actions

Direct API connections with Gen AI tools like ChatGPT and Anthropic, and enhanced MDM integrations with Intune and Kandji to discover apps installed on devices.

7

BI Dashboards

Create customized widgets and visualizations across key metrics, such as license utilization, user activity, access insights, risk posture, spend analysis, and more.

8

Zluri CoPilot

AI-powered search assistant to simplify access to insights and data from within the platform.

2. Integrations & Platform Capabilities

9

Enterprise Search (Agentic AI)

Predictive prompts to anticipate user intent and multi-turn dialogue support for managing contextual queries. Offers recommendations and actions that can be taken with Agentic AI.

10

Custom Reports

Create, manage, and schedule tailored reports using data from integrated sources and dashboards.

11

Entity-Based RBAC

Invite users to manage only specific entities they own or are responsible for, such as applications, contracts, departments, users, and access reviews.

12

Zluri API Key Management

Central dashboard to manage Zluri API keys with granular permissions (e.g., get app users, run workflows), audit logs, and RBAC to enable authorized users to create or modify keys.

3. Access Requests

1

Access Request Form Customization

Customizable access request forms that allow you to hide default fields, mark fields as required or optional, rearrange field order, and create app-specific configurations.

2

Two-way Sync between ITSM & Zluri for Access Requests

Improved ITSM and Zluri connection to sync app catalogs, access request forms, provisioning/deprovisioning, and audit logs. Admins can manage access requests from either platform with no change management required for employees.

3

Access Request Approval Insights

Insights displaying users with similar access/entitlement levels to guide approval decisions for high-privilege access requests.

4

SOD Policy Violation Monitoring

Monitors access requests for SOD policy violations at the point of submission, sending immediate alerts through Slack and email.

4. Access Management

1

ZEN Groups and Recommendations

Automate group-based access provisioning and manage entitlements with intelligent suggestions for optimal group membership, including recommendations to merge redundant groups and remove unused or obsolete ones.

2

Variables & Action Output Chaining

Access more predefined variables, including application details, user attributes, access request data, license data, and define custom variables. Create interconnected workflows in Zluri by allowing data to flow seamlessly between actions.

3

Timezone Configuration

Set timezone preferences at the organizational level and user level for onboarding and offboarding workflows. Trigger playbooks relative to start or end date, such as initiating the onboarding playbook 10 days before the onboarding date/time.

4

Triggers

Broader set of event-based triggers across users, applications, and policies, with support for advanced conditional logic and webhook integrations.

4. Access Management

5

Roles & Entitlements Management

Unified catalog of application roles, enriched with metadata including descriptions, permission scopes, and access levels.

6

Custom Automation Actions

Extend Zluri workflows with custom actions that interact with both Zluri-integrated and non-integrated systems (external applications) using standardized HTTP requests and configurable authentication handling.

7

Instance-Level Lifecycle Management

Automated onboarding and offboarding for users at the instance level.

8

Workflows 2.0

A centralized place for all automation across the platform, featuring a visual flow builder, a template library with pre-built workflows, and support for Trigger-Condition-Action structure.

5. Access Reviews

1

Group Reviews

Enables organizations to review user memberships within the application or SSO groups.

2

Entitlement Reviews

Enables organizations to review specific access entitlements to ensure only authorized identities maintain access to sensitive systems and data.

3

User Reviews

Enable organizations to conduct focused access reviews for specific users.

4

Delta Reviews

Access reviews that focus only on changes since the last review cycle.

5. Access Reviews

5

Access Review Enhancements

Automatically identify orphaned accounts, dormant users, privileged access, and suggest remediation actions (approve/revoke/modify) based on risk analysis.

6

Access Certification Templates

Ready-to-use configurations for common compliance frameworks, custom template configuration, and automatically initiate certifications based on security events.

7

AI- and Policy-Powered Insights for IGA

AI/ML-driven contextual intelligence that analyzes user behavior and offers approvers and reviewers dynamic insights.

8

Instance-Level Access Reviews

Enable access reviews for individual instances to ensure precise access control and compliance.
